

NAME

CUTESt_ureport_threaded – CUTEst tool to obtain statistics concerning function evaluation and CPU time used.

SYNOPSIS

CALL CUTESt_ureport_threaded(status, CALLS, TIME, thread)

DESCRIPTION

The CUTESt_ureport_threaded subroutine obtains statistics concerning function evaluation and CPU time used for unconstrained or bound-constrained optimization in a standardized format.

The problem under consideration is to minimize or maximize an objective function $f(x)$ over all $x \in R^n$ subject to the simple bounds $x^l \leq x \leq x^u$. The objective function is group-partially separable.

ARGUMENTS

The arguments of CUTESt_ureport_threaded are as follows

status [out] - integer

the output status: 0 for a successful call, 1 for an array allocation/deallocation error, 2 for an array bound error, 3 for an evaluation error, 4 for an out-of-range thread,

CALLS [out] - real array of length 4

gives the number of calls to the problem functions:

CALLS(1): number of calls to the objective function

CALLS(2): number of calls to the objective gradient

CALLS(3): number of calls to the objective Hessian

CALLS(4): number of Hessian times vector products,

TIME [out] - real array of length 2:

TIME(1): CPU time (in seconds) for CUTESt_usetup_threaded

TIME(2): CPU time (in seconds) since the end of CUTESt_usetup_threaded,

thread [in] - integer

statistics are for the specified thread; threads are numbered from 1 to the value threads set when calling CUTESt_usetup_threaded.
